

PROFILE

AI Research Engineer with 2+ years of experience across AI/ML, large language models, computer vision and AI automation. I work with LLM systems (RAG, embeddings, tool-calling agents), machine learning and deep learning, and self-taught n8n automation, having independently built and shipped 30+ production workflows. I apply these technologies to solve real-world problems and deliver impactful, high-quality solutions that people can rely on.

EDUCATION

10/2020 – 09/2024
Amman, Jordan

Computer Engineering
University of Jordan
GPA: 3.77 (Excellent)

PROFESSIONAL EXPERIENCE

- 01/2025 – present
Amman, Jordan

AI Research & Integration Engineer, Penguin Location Services
 - Develop LLM applications using RAG, embeddings, vector databases, and local/open-source LLMs via Ollama.
 - Apply prompt engineering to build AI-powered assistants that integrate language models with external tools.
 - Research and evaluate AI/ML approaches through trial and error, keeping what holds up on real data rather than on a clean test set.
 - Work with BLE, IoT devices, controllers and MQTT in RTLS applications, applying machine learning models to noisy sensor data.
- 10/2024 – 01/2025
Amman, Jordan

AI Research Engineer Intern, Penguin Location Services

Worked with BLE and IoT devices in RTLS applications, training AI models (KNN, Decision Trees, Random Forest) and implementing a custom probabilistic model during the internship.
- 07/2024 – 09/2024
Amman, Jordan

AI and ML Engineer Intern, Leading Point Software

Onsite internship in data science, machine learning, deep learning and computer vision: developed machine learning models including image classification and object detection, with hands-on experience of AutoML tools.

INDEPENDENT WORK

- Ongoing
Independent

AI Automation & Agents, Self-Taught / Independent
 - Learned n8n independently and built 30+ production workflows, including tool-calling Telegram agents (task management, voice-in/voice-out scheduling, CV review, customer support with human handover).
 - Built a production WhatsApp Business Cloud API integration backed by MongoDB, with verified webhooks and rate-limited batch sending.
 - Self-host and maintain n8n on a Hostinger VPS; built a self-updating RAG knowledge base over Pinecone.

PROJECTS

- Dublejli – AI-Driven Video Dubbing System**

Exhibited at SOFEX 2024 (Aqaba) and National Technology Parade 2024. Integrated Speech-to-Text, Translation, and Text-to-Speech, with a custom synchronization algorithm to match the dubbed audio to the original video.
- Google Calendar Voice Assistant (n8n)**

Voice/text Telegram assistant that creates, reads, updates, and deletes Google Calendar events via four dedicated tools, confirming details before saving; replies in text or speech to match the input.
- WhatsApp Business Cloud API Integration (n8n, MongoDB)**

Production client messaging system with MongoDB as source of truth, verified webhooks, and rate-limited batch sending.
- Self-Updating RAG Knowledge Base (n8n, Pinecone)**

Google Drive–synced RAG pipeline (Pinecone + HuggingFace embeddings) that ingests only new files on a schedule.
- Jordanian Currency Detection and Counting Using YOLOv8** [GitHub](#) | [Live Demo](#)

Custom-collected dataset for detecting and counting Jordanian notes and coins; deployed as a live Streamlit app.
- Fire & Smoke Detection – Binary Classification on Sensor Data** [GitHub](#) | [Live Demo](#)

Trained seven ML models (Logistic Regression through a Keras neural network) on 62K+ IoT sensor readings; deployed a Streamlit app comparing all seven side-by-side.

TECHNICAL SKILLS

- AI/LLMs: RAG, Embeddings, Vector DBs (Pinecone, FAISS), Prompt Engineering, Agentic Workflows, Tool Calling, Ollama, LangChain
- Machine Learning & CV: TensorFlow, Keras, Scikit-learn, OpenCV, YOLO (Ultralytics), Pandas, NumPy
- Automation & Integration: n8n (self-hosted), Python, Telegram/WhatsApp/Gmail/Google APIs, MongoDB, Webhooks, REST APIs
- Engineering: Java, C++, Verilog, Git/GitHub

LANGUAGES

- Arabic (Native)
- English (Professional)
